

James M. Condon Memorial Scholarship

James M. Condon was an excellent civil engineer who specialized in transportation and mobility projects. James grew up in the Wichita, KS, area and followed his father, Jim, into the civil engineering field. James was a true Jayhawk as he attended the University of Kansas and began his career in Kansas City. He ultimately followed the calling of the mountains and the great outdoors to Colorado.

Design projects he specialized in included interstates highways, interchanges, freeways, arterial roadway systems, regional trails and parking facilities. In addition to being a fantastic engineer, James was a wonderful and caring son, brother, coworker and friend. Muller Engineering Company is pleased to sponsor this scholarship to honor James's contribution to the engineering profession and to recognize the special place he filled in the hearts of those that knew him.

Awarded Annually Through
