

ACE Mentor Program of Colorado serves high school students who want to explore careers in architecture, construction, engineering and any trades related to these fields. Throughout the spring semester, the ACE program, which meets two hours per week for 17 weeks, introduces participants to building industry professions by having them plan and design mock projects on real sites and work with professionals in the design and build industries. Working with industry professionals help the students with networking for future opportunities such as internships, letters or recommendations, etc. This provides the students great networking opportunities for the future. ACE students also have the chance to work with graduate students from the University of Colorado Denver (CU Denver). CU Denver students earn credit hours toward their degrees by participating in the program as mentors.

“ACE is an incredible program that strengthens the connection between professionals, empowers new students to take on incredible challenges, and promotes collaboration within our diverse fields. The program is a unique opportunity for everyone to be in the same room outside the confines of work and share a positive experience in learning and educating.” Quote from an ACE Mentor.
